

MAJOR REPAIRS AND REFURBISHMENT SERVICES

AIRSIDE CONSTRUCTION EXCELLENCE SINCE 1999

WHO WE ARE

AERO BridgeWorks, Inc.
is the largest and most experienced specialty airside construction firm in the U.S. We have the resources to manage, design, and build at any size airport nationwide.

Our expertise and talent in fixed ground-support systems are helping airlines and airports coast-to-coast optimize their operations. We partner with general contractors, manufacturers, architects, airlines, and airports to safely deliver projects on schedule and within budget while creatively solving complex construction issues.

MAJOR REPAIRS

With over 15,000 passenger boarding bridge (PBB) projects in our portfolio, AERO BridgeWorks is uniquely qualified to provide comprehensive major repair and refurbishment services to our clients. We work closely with airport management and operations to review and develop preventative maintenance processes and minimize downtime due to mechanical and environmental factors. AERO is equipped to handle many different levels of repair and refurbishment services. We have developed long-term relationships with all the major GSE manufacturers and ancillary equipment providers to help your facility/maintenance departments influence ranging from full maintenance implementation and management to supplemental services to support airport operations.

REFURBISHMENT

AERO BridgeWorks has assisted airports and airlines nationwide, with refurbishment and repair services allowing those airports to extend the operational life of their passenger boarding bridges. Refurbishment can serve as an important component to an Airport Master Plan strategy in times of diminished revenues. AERO can provide a comprehensive refurbishment schedule addressing mechanical, electrical, and aesthetic elements of the PBB or we can provide a scalable plan tailored to the airports specific long term goals.
